

Quiet Bubble™

Waterborne Radon System

“The Quiet Bubble™ system, at full operation, is as quiet as a running kitchen faucet.”

Our Radon Guarantee

Your installation includes a treated waterborne radon lab test. If not below 5,000 pCi/L, we will adjust the system and re-test at our expense until resolved.

Features & Specifications

- 75-gallon, 23”x 50”, polyethylene tank
- 1/2 hp, 12-gpm, submersible (in-tank) pump
- Dual, stainless steel, inlet solenoids
- **Dual, quiet, hydro-powered aerators**
- 3/4” plumbing manifold
- Independent bypass
- Low water float switch pump protection
- 50-psi “constant-pressure” module
- “Quietest aeration system on the market”
- Includes sediment pre-filter
- Includes treated waterborne radon test
- 115-volt, 20 amp circuit required

Dual Hydro-Powered Aerators

The water is powerfully aerated with radon - liberating bubbles both as it enters the tank and continuously while delivering treated water.

Quiet is Important

- Waterborne radon systems cycle as water is used throughout the day.
- Those with electric blowers are “as loud or louder” than a central vac!
- Our aerators are quiet hydro-powered.

Patented Design

U.S. Patent Number 7806960

Limited Warranty

The Quiet-Bubble is proudly warranted against defects in materials and workmanship (not normal wear) from the date and site of original installation and limited to the repair or replacement of the defective part(s) for 1 year.

Please call for pricing.

- This system is only available for purchase.
